Hazard category of the installation and description of the chemicals used

Iru PP is a company with category B major accident hazard. The hazard class comes from the fact that the total amount of chemicals in the environmental hazard category exceeds the minimum hazard level for the threshold quantity specified in the 02.02.2016 Regulation No. 10 "The minimum level of hazardousness and the threshold of hazardous chemicals and the procedure of determination the enterprise hazardousness category" by the Minister of Economic Affairs and Infrastructure. The company holds all the required permits to operate.

The company's field of activity complies with the Seveso II Directive. We properly fulfill all the obligations arising from the rules, we have prepared a risk analysis to identify the hazards, and we have established a safety assurance system in the company to minimize the risks. We have an internal emergency plan in place to respond to emergencies.

According to the risk analysis, the neighboring property is affected by a fire caused by the rupture of our natural gas pipeline, the radius of the danger zone of medium-term heat radiation is shown in a separate figure ($R_0=65$ m)
